

## **IN THE SPECIFICATION**

Please amend the paragraph on page 9, lines 4 – 8 to read as follows:

As demonstrated by the results above, the process of the present invention effectively removes acrolein from acrolein-containing process streams. Notably, preferred scavenger compounds containing thiol groups achieve acrolein removal that is necessary for the most critical end use applications for the refined process stream. ~~{Do we have any examples where the final concentration is less than 5 ppm?}~~
